**Applicant:** BRIDGESTONE CORP [000527] (A Japanese Company or Corporation), JP (Japan)**Application No.:** 06-195540 [JP 94195540]**Filed:** August 19, 1994 (19940819)**International Class:** [ 6 ] C08L-009/06; C08K-003/04; C08K-003/36; C08K-005/54; C08L-057/02; C08L-061/14**JAPIO Class:** 14.2 (ORGANIC CHEMISTRY -- High Polymer Molecular Compounds); 26.2 (TRANSPORTATION -- Motor Vehicles)**ABSTRACT**

**PURPOSE:** To obtain a rubber composition which can give a tire tread improved in grip on a wet or semiwet road surface in both low-temperature and high- temperature regions without detriment to wear resistance.

**CONSTITUTION:** This composition comprises 100 pts.wt. rubber component containing at least 70 pts.wt. SBR of a styrene content of 20-60%, 5-150 pts.wt. powdery inorganic compound represented by the general formula,  $mM(\text{sup } 1).x\text{SiO}_y.z\text{H}(\text{sub } 2)\text{O}$  (wherein  $M(\text{sup } 1)$  is at least one metal selected from among Al, Mg, Ti and Ca, oxides thereof, and hydroxide thereof; and (m), (x), (y) and (z) are integers of 1-5, 0-10, 2-5 and 0-10, respectively) and having a particle diameter of 0.01-10. $\mu\text{m}$ , 5-150 pts.wt. silica having a nitrogen adsorption specific surface area of 130-280 $\text{m}(\text{sup } 2)/\text{g}$ , and 5-170 pts.wt. (the total amount of the inorganic compound, the silica and this component being 80-250 pts.wt.) carbon black having a nitrogen adsorption specific surface area of 80-288 $\text{m}(\text{sup } 2)/\text{g}$  and has a content of acetone/chloroform extractibles of 30-270 pts.wt. after vulcanization.
